

Why IFS is perfect for regulated manufacturing

In highly regulated manufacturing sectors, it's essential to maintain compliance while ensuring that overall operations remain efficient and competitive. IFS is designed to help manufacturers in these industries meet these strict requirements seamlessly, combining advanced functionality with intuitive ease of use – thereby supporting innovation and consistently excellent standards.

Here's what IFS has to offer regulated manufacturers.

Electronic Batch Manufacturing Records (EBMR)

IFS automates the management of batch records, reducing reliance on paperwork – which is easily mislaid – and ensuring consistent data accuracy. This means faster batch release times and improved traceability for every product, making audits simpler and more efficient.

Built-in validation and compliance tools

IFS includes powerful validation support, helping manufacturers streamline compliance with strict industry regulations like the FDA's 21 CFR Part 11. These tools simplify both initial and ongoing validations, helping organisations meet the necessary global standards while reducing the complexity involved.

Document control and traceability

IFS ensures comprehensive document control across all stages of manufacturing, enabling secure storage, easy retrieval and traceability of every record. This robust document management system minimises the risk of non-compliance and improves audit readiness.

Quality management and risk mitigation

Equipped with quality management tools for continuous monitoring and improvement, IFS helps manufacturers proactively identify risks and comply with regulatory standards. This reduces the risk of non-compliance – and the penalties that go with, including heavy fines – while upholding product quality.

Supply chain oversight

With end-to-end visibility, IFS facilitates real-time monitoring along every stage of the supply chain, from sourcing all the way to delivery. This transparency helps to ensure adherence to strict quality standards at each step, minimising supply chain risks and strengthening overall compliance.

With IFS, regulated manufacturers have the tools they need to stay compliant, ensure product safety and maintain quality – all while staying agile in what is a complex and competitive industry.
